

MARINE STUDIES

Description

Marine Studies is a science based course that involves the study of marine ecosystems, how we interact with the marine environment and opportunities for employment in the marine industry.

Marine Studies explores the water world through scientific investigations, research and experiences.

Students will study a range of options which may include:

- The Marine Aquarium
- Anatomy and Physiology
- Reproduction of Common Marine Species
- Dangerous Marine Creatures

Assessment

Students will demonstrate their learning through a range of assessment tasks which include research and presentation tasks, practical investigation and written examinations.

Additional Information

Students may have the opportunity to construct an aquarium, go fishing, go snorkelling with sharks and rays, visit the Sydney Boat Show, visit the Sydney Aquarium as well as prepare and cook seafood.

Costs

Excursion costs are additional.
